

Introducing the new Sonicator® Plus 921 & 941

Two or Four Channel Stimulators with Ultrasound

The Sonicator® Plus 921 & 941 are a 2 or 4 channel combination stimulators with ultrasound. They feature vivid color touch screens for quick and easy treatment setups.

The 921 and 941 offer 6 unique waveforms; Interferential (IF-4), Premodulated (IF-2), EMS, Russian, TENS and High Voltage (HV). The easy-to-use software interface allow for quick set up, precision and clinical accuracy. There is control knob to adjust treatment intensity for stimulation and ultrasound with precision and accuracy.

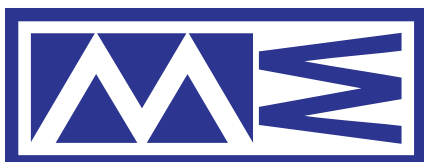

The clinician can change any treatment parameter both before and during a treatment. The Sonicator Plus 921 & 941 offer an anatomical library with electrode placement and treatment recommendations. All treatment recommendations are written by clinicians.

There is space for the clinician to store and use treatment protocols along with a description for each. This

is a tremendous combination device for any practice. With 6 clinical waveforms and 1 and 3 MHz frequency ultrasound, the Sonicator Plus 921 & 941 are among the most advanced units on the market.

Features and Benefits

- Six Waveforms Available
- Intensity Control Knob
- Anatomical Treatment Protocols
- 50 User Defined Protocols
- 8 Inch TFT Color Touch Screen
- Multi-Frequency Treatment Applicator (1 MHz and 3 MHz) for ultrasound
- Optional Treatment Cart
